

STREAKIT — CREATIVE & UI/UX DESIGN BRIEF

01. Project

StreakIt is a microbiology-focused virtual learning environment designed to help students **learn, practice, make mistakes safely, understand consequences, and build mastery** through interactive virtual experiments.

The MVP combines:

- Interactive microbiology experiments
- Decision-based learning
- Mistake → consequence → explanation
- Context-aware AI Lab Mentor
- Assessment and scoring
- Retry/practice
- Skill-based progress
- Learning streaks
- Daily microbiology challenges

Core Product Idea

StreakIt doesn't just teach students how to perform microbiology experiments. It helps them become better at microbiology.

02. Creative Direction

The overall feeling:

Modern. Scientific. Energetic. Premium. Intelligent. Experimental.

StreakIt should feel like:

A completely new way to experience microbiology learning.

It should sit between:

serious scientific credibility × modern Gen-Z product design

It should **NOT** feel like:

- Traditional educational software
- A university LMS
- A generic AI startup
- A children's science app
- A gaming platform

- A futuristic sci-fi interface

Important:

The Gen-Z influence should be **subtle and natural**.

The product should feel current and culturally fresh without visibly trying to “look Gen Z.”

03. Visual Identity

Color Direction

The foundation should use a **warm nude / neutral palette**.

Think:

- Warm ivory
- Soft nude
- Sand
- Warm off-white
- Subtle taupe

Then introduce:

Signature personality color

A **muted coral / terracotta family**.

Unexpected scientific accent

One restrained **cool blue/teal** accent.

The goal:

Warm human palette + one cool scientific interruption.

Color must **never become distracting**.

The UI should remain predominantly calm and neutral, with color appearing intentionally for:

- Primary actions
- Important interactions
- Progress
- Streaks
- AI guidance
- Results
- Scientific information

Functional colors should also exist for:

- Success
- Warning
- Error
- Information

But they must remain visually controlled.

04. 3D Visual Direction

The virtual laboratory is a major part of StreakIt's identity.

Style:

Semi-realistic + stylized scientific 3D.

Objects should be:

- Scientifically recognizable
- Sleek
- Premium
- Tactile
- Slightly exaggerated in form
- Cleanly modeled
- Softly lit

Avoid:

- Hyper-realistic photography-style rendering
- Dirty/gritty realism
- Toy-like objects
- Cartoon/Pixar-style objects
- Excessively futuristic holographic objects

The laboratory should feel like:

Real science, refined into a designed digital world.

Key objects may include:

- Microscope
- Petri dishes
- Slides
- Pipettes
- Tubes
- Reagent bottles
- Staining equipment
- Culture materials

- Experiment-specific equipment

The 3D visual language must remain consistent across future experiments.

05. StreakIt Visual Motif

The word “**Streak**” should influence the visual system.

Explore a combination of:

- Continuous paths
- Streak lines
- Parallel scientific streak patterns
- Progress paths
- Motion trails
- Experiment progression

The streak motif can appear subtly in:

- Progress indicators
- Transitions
- Charts
- Loading states
- Brand graphics
- Experiment flows
- Motion

It should become part of StreakIt's **visual fingerprint**, not a decorative line randomly placed everywhere.

06. Typography

Use:

Display typography

Bold, confident, modern and expressive.

UI typography

Extremely clean, readable and disciplined.

The contrast should create:

Expressive brand + disciplined product.

Avoid overly futuristic or gimmicky fonts.

07. Shape Language

Use:

Slightly rounded + crisp edges

The interface should feel:

- Approachable
- Modern
- Precise
- Scientific

Avoid:

- Extremely rounded “children's app” cards
 - Extremely sharp corporate interfaces
 - Excessive pill-shaped UI
-

08. UI/UX Philosophy

The interface should be **clean and calm**, while the laboratory experience can become more immersive.

Product rhythm:

Calm Dashboard

Immersive Experiment

Interactive Decision

Visible Consequence

Scientific Explanation

Result

Progress / Mastery

The UI should never compete with the actual experiment.

09. MVP Screens / Flow

Design the complete core journey:

Landing

Introduce StreakIt's proposition quickly and visually.

Onboarding / Login

Simple, frictionless and modern.

Dashboard

Show:

- Current streak
- Progress
- Skills
- Recent activity
- Recommended experiment
- Daily challenge

Experiment Library

Show:

- Experiment
- Difficulty
- Estimated time
- Skill/concept
- Progress/completion

Experiment Brief

Show:

- Objective
- Core concept
- Equipment/materials
- Safety
- What the student will learn
- Start Experiment

Virtual Laboratory

This is the centerpiece.

Students should be able to:

- Select objects/materials
- Perform actions
- Make decisions
- Follow procedures
- Make mistakes
- Observe consequences
- Complete the experiment

AI Lab Mentor

The AI should feel **native to StreakIt**.

No generic robot mascot.

No floating AI orb.

It should provide:

- Explanations
- Contextual hints
- Troubleshooting
- Concept clarification
- Mistake explanations
- Experiment-specific guidance

The AI should **guide rather than perform the experiment for the student**.

Results / Interpretation

Students interpret what happened rather than simply receiving “complete.”

Assessment

Show:

- Overall score
- Procedural accuracy
- Decision accuracy
- Interpretation
- Mistakes
- Areas needing practice

Retry / Practice

Make improvement visible.

Example:

Attempt 1 → 68%

Attempt 2 → 84%

Progress

Show skill-based development rather than only completion.

Daily Challenge

A short microbiology challenge that reinforces the learning streak.

10. Core Interaction Principle

The most important interaction philosophy:

**Choose → Perform → Observe → Make a mistake → Understand the consequence →
Correct → Retry → Master**

Do NOT make the experiments feel like:

Click → Next → Click → Next → Done.

Students need to make meaningful decisions.

11. Gamification

Gamification should be **subtle**.

Use:

- Streaks
- Progress
- Mastery
- Improvement
- Small rewards

Avoid:

- Childish badges everywhere
- Leaderboard-heavy design
- Game-like dashboards
- Excessive points
- Cartoon characters

The feeling should be:

"I'm getting better at microbiology."

not:

"I'm playing a science game."

12. Motion & Micro-interactions

Motion should be:

Minimal + smooth + satisfying.

Use motion to communicate:

- Cause and effect
- Experiment actions
- Progress
- Success
- Mistakes
- Streak activation
- State changes

Avoid animation purely for decoration.

The interface should feel **alive, not noisy.**

13. Scientific Visual Language

Scientific visuals should be:

Accurate but stylized.

Potential visual inspiration:

- Microscopy
- Bacterial colonies
- Staining patterns
- Cell structures
- Petri dishes
- Culture growth
- Scientific diagrams
- Abstract biological forms

Avoid generic DNA-helix imagery everywhere.

StreakIt should feel specifically connected to **microbiology**, not generic “science.”

14. What StreakIt Should NEVER Look Like

Avoid:

- ✗ Dull corporate colors
 - ✗ Generic navy/blue edtech aesthetic
 - ✗ Generic purple AI gradients
 - ✗ Excessive neon
 - ✗ Glassmorphism everywhere
 - ✗ Sci-fi holograms
 - ✗ Cartoon bacteria
 - ✗ Childish illustrations
 - ✗ Gamer UI
 - ✗ Over-gamification
 - ✗ Cluttered dashboards
 - ✗ Stock-photo-heavy branding
 - ✗ Random decorative science graphics
 - ✗ Hyper-realistic 3D
 - ✗ Toy-like 3D
-

15. Deliverables

The design scope is intentionally focused.

A. Logo + Mini Brand Identity

Deliver:

- StreakIt logo / wordmark
- Logo mark / app icon
- Color palette
- Typography
- Basic iconography
- Streak visual motif
- Basic visual guidelines

B. Complete MVP UI/UX

Deliver:

- Core MVP screens
- User flow
- Component system
- Interaction states
- Responsive considerations

- 3D laboratory visual direction
- Core 3D asset style

C. 60-Second Pitch Presentation

Create a short, visually strong pitch communicating:

Problem → Existing gap → StreakIt's solution → How it works → Differentiation → Why it matters

The pitch should be **product-led and visual**, not text-heavy.

FINAL CREATIVE NORTH STAR

STREAKIT = MICROBIOLOGY REIMAGINED.

The product should feel like **learning has been redesigned for a new generation of microbiology students.**

Calm UI.

Immersive 3D lab.

Warm, distinctive color.

Scientific credibility.

Subtle Gen-Z energy.

Meaningful interaction.

Satisfying progression.

Most importantly:

Don't design a prettier virtual laboratory. Design what a new category of microbiology learning should feel like.
